

KIDPULSE E-COMMERCE

Requirement Gathering — Detailed version

Lunor Labs (Pvt) Ltd

1. Storefront & Product Browsing

#	Requirement	Explanation
1.1	Homepage with featured/banner products	The homepage displays highlighted and promotional products at the top to immediately capture the customer's attention and drive sales.
1.2	Product listing page with filters (category, price, age group)	Customers can narrow down the product catalogue using filters like category, price range, and age group to find relevant kids' items faster.
1.3	Product detail page (images, description, price, variants, stock status)	Each product has a dedicated page showing full details, images, available size/color variants, and whether the item is in stock or sold out.
1.4	Search bar with keyword suggestions	A search bar with auto-suggestions allows customers to quickly find products by typing keywords like toy names, age ranges, or categories.
1.5	Product reviews & star ratings	Customers can leave star ratings and written reviews on products, helping other parents make confident purchasing decisions.

2. Customer Accounts

#	Requirement	Explanation
2.1	Register / Login with email & password	Customers can create an account using their email and a password to access personalised features like order history and saved addresses.
2.2	Social login (Google)	Customers can sign in or register using their existing Google account, removing the need to remember a separate password.
2.3	View & edit profile	Customers can update their personal information such as name, phone number, and default delivery address from their account dashboard.
2.4	Order history & tracking	Customers can view all their past and current orders along with real-time status updates so they always know where their delivery is.
2.5	Wishlist / Save for later	Customers can save products they are interested in to a wishlist, making it easy to return and purchase them later.

3. Cart & Checkout

#	Requirement	Explanation
3.1	Add to cart / update quantity / remove items	Customers can add products to a shopping cart, adjust quantities, or remove items before proceeding to checkout.
3.2	Guest checkout (no registration required)	Customers who do not want to create an account can still complete a purchase by entering their details at checkout as a guest.
3.3	Apply coupon / promo code	Customers can enter a discount or promotional code during checkout to reduce the total price of their order.
3.4	Multiple delivery address support	Customers can save and choose from multiple delivery addresses, which is useful for sending gifts directly to different locations.
3.5	Order summary before payment	Before confirming payment, customers are shown a full summary of their items, quantities, delivery address, and total cost for review.

4. Payments

#	Requirement	Explanation
4.1	PayHere payment gateway	KidPulse integrates with PayHere, Sri Lanka's leading payment gateway, to accept credit/debit card and online bank payments securely.
4.2	Cash on Delivery option	Customers who prefer not to pay online can select Cash on Delivery and pay the rider when their order arrives.
4.3	Order confirmation email after payment	An automated email is sent to the customer immediately after a successful payment, confirming their order details and reference number.
4.4	Failed payment retry flow	If a payment fails, the customer is shown a clear error message and given the option to retry with the same or a different payment method without losing their order.

5. Order Management (Admin)

#	Requirement	Explanation
5.1	View all orders with status (Pending, Processing, Shipped, Delivered)	The admin can see a list of all customer orders and click on any order to view full details including customer information, items ordered, and current status.
5.2	Update order status manually	Admins can manually change the status of an order (e.g. from Processing to Shipped) to keep the fulfilment workflow accurate and up to date.
5.3	Generate invoice / packing slip	The admin can generate a printable invoice or packing slip for each order to include with the physical delivery package.
5.4	Notify customer on status change (email)	Whenever an admin updates an order's status, an automated email notification is sent to the customer to keep them informed of their delivery progress.

6. Product & Inventory Management (Admin)

#	Requirement	Explanation
6.1	Add / edit / delete products	Admins can create new product listings, update existing product details such as price and description, or remove discontinued items from the store.
6.2	Manage product categories & tags	Admins can organise products into categories (e.g. Toys, Clothing) and assign tags to improve browsing and search discoverability on the storefront.
6.3	Set stock quantity & low-stock alerts	Admins can set the available stock count for each product and receive alerts when stock drops below a defined threshold to avoid overselling.
6.4	Manage product variants (size, color, age range)	Admins can configure multiple variants for a single product such as size, colour, or age range, each with its own stock and pricing.

7. Promotions & Coupons (Admin)

#	Requirement	Explanation
7.1	Create discount codes (fixed / percentage)	Admins can generate coupon codes that offer either a fixed amount off (e.g. Rs. 500 off) or a percentage discount (e.g. 10% off) on the order total.
7.2	Set expiry date & usage limit	Each coupon can be configured with an expiry date and a maximum number of times it can be used, preventing misuse or overspending on discounts.
7.3	Apply automatic discount for specific categories	Admins can set up automatic discounts that apply to all products in a specific category without requiring the customer to enter a code.

8. Customers (Admin)

#	Requirement	Explanation
8.1	Customer list	Admins can view a searchable and filterable list of all registered customers on the platform to manage and monitor the customer base.
8.2	View customer profile and details with their order history and reviews	Admins can open an individual customer's profile to see their contact details, all orders they have placed, and any product reviews they have submitted.

9. Analytics & Reports (Admin)

#	Requirement	Explanation
9.1	Sales overview dashboard	The admin dashboard displays a visual summary of key sales metrics such as total revenue, number of orders, and average order value over selected time periods.
9.2	Best-selling products report	Admins can view a ranked list of the top-performing products by sales volume or revenue to inform restocking and marketing decisions.
9.3	Customer activity report	Admins can review customer activity data such as new registrations, repeat purchases, and wishlist activity to understand buying behaviour.

#	Requirement	Explanation
9.4	Export reports to CSV	All reports can be downloaded as a CSV file so admins can use them in spreadsheet tools like Excel for further analysis or sharing with stakeholders.

10. General / Non-Functional Requirements

#	Requirement	Explanation
10.1	Mobile responsive design	The entire storefront is designed to display and function correctly on all screen sizes including mobile phones, tablets, and desktops.
10.2	SEO-friendly pages (meta titles, descriptions)	Each product and category page includes customisable meta titles and descriptions so the site ranks better on Google search results.
10.3	Fast page load (basic performance optimization)	The website is optimised for speed using techniques like image compression and caching so pages load quickly and reduce customer drop-off.
10.4	SSL / secure checkout	All data transmitted between the customer's browser and the server is encrypted using SSL to ensure secure transactions and protect customer information.
10.5	Basic admin role management (super admin vs staff)	The admin panel supports two access levels — Super Admin with full permissions and Staff with limited access — to control what each team member can see and do.
